PagePrograms and Departments at mdh

Overview

Mediadesign Hochschule, also known as mdh University of Applied Sciences, offers study programs in creative, digital, business, management, technology, and legal fields. The university provides Bachelor's programs, Master's programs, micro degree programs, apprenticeships, and further education options.

mdh mainly focuses on practical and career-oriented education. The programs are designed for students who want to work in areas such as design, media, film, games, fashion, business, information technology, artificial intelligence, cybersecurity, and digital transformation.

Academic Areas / Departments

mdh does not publicly present a strict official faculty or department structure. Based on the official study programs, the main academic areas can be described as follows:

1. Design and Media Design

This area focuses on visual communication, creative design, user experience, user interface design, and digital media production.

Related programs include:

- Media Design - Communication Design
- Media Design - UX/UI Design
- Design
- Design Management
- Digital Film Design VFX

2. Film, VFX, and Digital Production

This area focuses on film design, visual effects, digital storytelling, and media production.

Related program:

- Digital Film Design VFX

3. Game Design

This area focuses on game development, game concepts, interactive media, and digital entertainment.

Related program:

- Game Design

4. Fashion and Media Management

This area focuses on fashion business, media industries, marketing, brand management, creative industries, and management skills.

Related programs include:

- Fashion Management
- Media Management

5. Business and Digital Business

This area focuses on international business, digital business models, management, leadership, and business transformation.

Related programs include:

- Global Business - International Management
- Global Business - Digital Business
- Global Business
- Digital Business
- Digital Leadership

6. Information Technology

This area focuses on software development, web applications, cybersecurity, artificial intelligence, data analytics, usability, and digital systems.

Related programs include:

- Information Technology - Web Applications and Software Development
- Information Technology - Network Engineering and Cyber Security
- Information Technology - Artificial Intelligence and Data Analytics
- Information Technology - Cybersecurity
- Information Technology - Front-end Development and Usability

7. Law and Legal Technology

This area focuses on business law, legal systems, digital legal processes, and legal technology.

Related programs include:

- Business Law
 - Legal Tech
-

Bachelor's Programs

The official mdh program list includes the following Bachelor's programs and specializations:

Bachelor of Arts Programs

- Digital Film Design VFX
- Media Design - Communication Design
- Media Design - UX/UI Design
- Media Management
- Fashion Management
- Global Business - Digital Business
- Global Business - International Management

Bachelor of Science Programs

- Game Design
- Information Technology - Network Engineering and Cyber Security
- Information Technology - Web Applications and Software Development
- Information Technology - Artificial Intelligence and Data Analytics
- Legal Tech
- Digital Business

Bachelor of Laws Program

- Business Law
-

Master's Programs

The official mdh program list includes the following Master's programs and specializations:

Master of Arts Programs

- Design
- Design Management
- Art Market Management
- Digital Leadership
- Global Business

Master of Science Programs

- Information Technology - Cybersecurity
- Information Technology - Artificial Intelligence and Data Analytics
- Information Technology - Front-end Development and Usability
- Digital Business

Master of Laws Program

- Business Law
-

Micro Degree Programs

mdh also lists micro degree programs in selected technology areas.

Micro degree programs include:

- Information Technology - Artificial Intelligence & Data Analytics
 - Information Technology - Cybersecurity
-

Apprenticeships and Further Education

mdh also offers apprenticeship and further education options.

Apprenticeship programs include:

- Media Design - Digital & Print
- Media Design - Image & Sound
- Game Designer
- Game Artist
- Game Programmer

Further education includes:

- Evening Class Graphic Design
-

Main Academic Focus

The main academic focus of mdh is the connection between creativity, technology, media, and business. The university combines design thinking, digital innovation, practical projects, and industry-oriented learning.

The strongest academic areas of mdh are:

- Media and design
- Film and visual effects
- Game design
- UX/UI design
- Fashion and media management
- Business and digital leadership
- Information technology
- Artificial intelligence and data analytics
- Cybersecurity
- Business law and legal technology

Information Technology — Master of Science at mdh

Program Name

Information Technology (M.Sc.)

The Information Technology Master's program at mdh University of Applied Sciences is a **Master of Science** degree program. It is designed for students who want to build advanced skills in modern IT, artificial intelligence, data analytics, cybersecurity, software systems, cloud technologies, and front-end development.

Degree Awarded

Master of Science (M.Sc.)

Duration

3 semesters

ECTS Points

90 ECTS

Language of Instruction

English

Study Format

On campus

Study Locations

The Information Technology M.Sc. program is offered at:

- **Berlin Campus**
- **Düsseldorf Campus**

Available Specialisations

mdh offers the Information Technology M.Sc. with three specialisations:

1. **Information Technology - Cybersecurity (M.Sc.)**
 2. **Information Technology - Artificial Intelligence and Data Analytics (M.Sc.)**
 3. **Information Technology - Front-end Development and Usability (M.Sc.)**
-

1. Information Technology - Cybersecurity (M.Sc.)

Overview

The Cybersecurity specialisation prepares students for the growing challenges of digital security. Students learn how to protect complex IT systems, analyse security vulnerabilities, defend against cyberattacks, and protect sensitive data.

The program focuses on both theory and practical application. Students work with modern cybersecurity methods and learn how to develop security concepts for companies, organisations, and public-sector institutions.

Main Study Areas

The Cybersecurity specialisation includes the following areas:

Foundations and Advanced IT

- Software Development and Programming
- Databases and Information Systems
- IT Project Management
- Distributed Systems and Cloud Computing
- Artificial Intelligence and Machine Learning

Cybersecurity Specialisation

- Web Security
- Cloud Security
- Mobile Security
- Data Security and Privacy

Practical Application

- Semester projects with industry partners
- Elective modules for individual specialisation
- Practice-oriented Master's thesis
- Study abroad semester in New Zealand

Skills Students Develop

Students develop skills in:

- Network security

- Cryptography
- Penetration testing
- Threat analysis
- Security architecture
- Cyberattack prevention
- Incident response
- Data protection
- Security risk management

Career Opportunities

Graduates can work in roles such as:

- IT Security Consultant
 - Penetration Tester
 - Security Architect
 - Incident Response Specialist
 - Chief Information Security Officer
 - Forensic Analyst
 - Security Operations Center Manager
 - IT Security Compliance Officer
 - Security Software Developer
 - Lecturer or Researcher in Cybersecurity
-

2. Information Technology - Artificial Intelligence and Data Analytics (M.Sc.)

Overview

The Artificial Intelligence and Data Analytics specialisation focuses on advanced data science, machine learning, big data systems, and AI-driven applications. Students deepen their understanding of data-driven systems and learn how to design intelligent solutions for business, industry, and public-sector challenges.

The program is research-oriented and practice-oriented. It combines advanced technical learning with practical projects and prepares students for specialist and leadership roles.

Main Study Areas

The AI and Data Analytics specialisation includes the following areas:

Fundamentals and IT Specialisation

- Advanced Programming Concepts
- IT Security and Network Technologies
- Cloud Computing and Distributed Systems
- Software Engineering and Architecture

Data Science Specialisation

- Advanced Machine Learning and AI Technologies
- Data Engineering and Big Data Systems
- Data Visualization and Data Analysis
- AI Ethics and Societal Implications

Practical Application

- Industry cooperation projects
- Research seminars
- Practical case studies
- Master's thesis with practical relevance

Skills Students Develop

Students develop skills in:

- Machine learning
- Data analytics
- Big data architecture
- Data engineering
- Data visualization
- Software architecture
- Cloud computing
- AI ethics
- Strategic data-driven decision-making
- Leadership in technology teams

Career Opportunities

Graduates can work in roles such as:

- Data Scientist
 - Machine Learning Engineer
 - Big Data Architect
 - AI Developer
 - Business Intelligence Analyst
 - Data Analytics Specialist
 - Technology Team Lead
 - AI or Data Strategy Specialist
-

3. Information Technology - Front-end Development and Usability (M.Sc.)

Overview

The Front-end Development and Usability specialisation focuses on the connection between humans and technology. Students learn how to design and develop high-performance, user-friendly, cross-platform front-end applications.

The program combines modern web technologies with usability engineering. It prepares students to build digital products that are technically strong, accessible, responsive, and easy to use.

Main Study Areas

The Front-end Development and Usability specialisation is based on five main pillars:

1. General Education and Scientific Work

- Scientific Research Methods
- Technology Management
- Entrepreneurship

2. Fundamental IT Skills

- Machine Learning and Intelligent Systems
- Advanced Programming

3. Front-end Development and Usability Specialisation

- Web Front-End Development
- Usability Engineering
- Mobile Front-End Development

4. Practice-Oriented IT Projects

Students apply their knowledge in real IT projects with increasing complexity.

5. Final Thesis

Students complete a scientific Master's thesis and colloquium.

Skills Students Develop

Students develop skills in:

- Front-end application development
- Web application architecture
- Mobile front-end development
- React, Angular, Vue.js, and modern web frameworks
- Usability engineering
- User research
- Usability testing
- Accessibility
- Performance optimisation
- User-centred interface design

Career Opportunities

Graduates can work in roles such as:

- Front-end Developer
 - UX/UI Engineer
 - Interaction Designer
 - Usability Consultant
 - Mobile App Developer
 - Full-Stack Engineer with focus on front-end
 - Software Engineer
 - Digital Product Developer
-

Admission Requirements

According to mdh, applicants generally need:

- A relevant Bachelor's degree or equivalent university qualification
- Relevant certificates

- CV with photo
- Proof of English language ability

mdh states that students may apply before completing their Bachelor's degree, and the Bachelor's certificate can be submitted later.

Accepted English proof includes:

- CEFR B2
 - PTE 52
 - TOEFL IPT 543
 - TOEFL iBT 60
 - IELTS 6.0
 - Duolingo 105
 - MOI / English Proficiency
-

Tuition Fees

For the English-speaking Information Technology M.Sc. programs at Berlin and Düsseldorf, mdh lists the following tuition fees:

- **EU students:** 650 € per month
- **Non-EU students:** 1,050 € per month

mdh also lists:

- One-time registration fee: 490 €
- One-time examination fee: 1,050 €

For non-EU students, mdh states that the one-time examination fee is included in the tuition fee.

Main Academic Focus

The main academic focus of the Information Technology M.Sc. at mdh is advanced digital technology. Depending on the chosen specialisation, students focus on cybersecurity, artificial intelligence, data analytics, front-end development, usability, cloud computing, distributed systems, programming, software engineering, and practical IT projects.

The program is suitable for students who want to work in advanced IT roles, technical leadership roles, software engineering, AI and data science, cybersecurity, or digital product development.
